

SNAPDRAGON AI LAB • BUILD & PRESENT CHALLENGE

SnapLearn Edge

Privacy-first on-device AI lecture & meeting copilot for
Snapdragon-powered HP PCs

OFFLINE-FIRST • PRIVACY-FIRST • SNAPDRAGON-READY

Pratham Priyanshu Mohanty

Solution Submission Round

Turn every lecture or meeting into private, actionable knowledge.

PROBLEM

Cloud-first AI creates friction

Sensitive recordings may leave the PC. Connectivity, latency and recurring inference cost can interrupt learning and work.

SOLUTION

Keep the workflow local

Audio → transcript → smart notes → action items → revision questions → grounded Q&A, designed for Snapdragon-powered HP PCs.

VALUE

One private productivity loop

Useful outputs even with weak connectivity, while maintaining an offline-first architecture.

USER FLOW

1 CAPTURE

Lecture / meeting audio

2 TRANSCRIBE

On-device Whisper ASR

3 UNDERSTAND

Local LLM structures notes

4 ACT

Ask, revise, export

Innovation: an edge-AI knowledge companion designed around local inference.

A modular Snapdragon deployment path with honest prototype boundaries.

Current status: functional UI + adapter scaffold. Hardware-specific NPU inference and performance metrics require validation on the target Snapdragon-powered HP PC.
